

Foot surgery

As part of our specialization in foot surgery, we offer a high level of outpatient and inpatient surgeries. At the start, we perform a precise diagnostic investigation of your problems with the most modern devices. We then individually discuss with you the possible therapy options and clarify whether non-surgical therapies (conservative therapies) could be an alternative. If you decide to have an operation, we will, of course, personally perform this at the RKM 740 Interdisciplinary Specialist Clinic. After the operation, we will also monitor you and put together a postoperative treatment concept so that you can achieve your goals, whether they be pain reduction in everyday life or practicing your sport again.

Of course, you'll also have an appointment with our anesthesia team before the operation. Here you will be thoroughly informed about the anesthesia. Some blood tests may also be done here preoperatively to accompany you safely through the operation.

Our patient management will discuss all further matters for a pleasant stay in our clinic. You'll find the right contact person here regarding desired services, such as accommodations in a single room.

We'll personally accompany you, from your first appointment in our practice to the conclusion of your follow-up treatment. The close cooperation with colleagues and fellow employees at the RKM 740 Clinic offers total care at the specialist level, short communication channels and a familiar atmosphere.

Foot Surgery: Services

In addition to diagnostics and therapy, our focus is also on the surgical treatment of complaints in the area of the foot. No matter what makes you feel uncomfortable, you are in the best hands with us. We perform the surgeries on an outpatient or on an inpatient basis.

- Achilles tendon complaints (achillodynia)/Haglund exostosis
- Heel spur/plantar fasciitis/heel pain
- Hallux rigidus (arthrosis of the joint at the base of the big toe)
- Hallux valgus (big toe deformity)
- Hammerzehen
- Krallenzehen
- Childhood flexible flatfoot (Pes planovalgus)
- Metatarsalgie
- Morton's neuroma
- Peronealsehnen
- Schneiderballen
- Frequently asked questions about foot surgery
